PROFESSIONAL SUMMARY

Recent cybersecurity graduate with a B.S. in Cybersecurity Management (May 2026) with hands-on experience in blue team competition, enterprise IT, and security-focused software engineering. Skilled in threat detection, log forensics, reverse engineering, and ML-driven behavioral analysis. Builds secure systems and communicates complex risk clearly to both technical and non-technical stakeholders. Deep knowledge of OS internals, network analysis, and game-security ecosystems; strong record of rapid skill acquisition and independent delivery.

EDUCATION

Nova Southeastern University — Davie, FL

August 2022 – May 2026

Bachelor of Science in Cybersecurity Management | Minor in Data Analytics

EXPERIENCE

Junior IT Staff

2024-June 2026

Cari-Med Limited — Kingston, Jamaica

- Delivered first-line technical support across hardware, software, and network systems for enterprise staff.
- Managed network operations including user access provisioning, connectivity troubleshooting, and equipment lifecycle documentation.
- Assisted with data backups, basic security checks, and system maintenance in a live enterprise environment.
- Collaborated with senior IT staff on system upgrades, patches, and routine maintenance initiatives.

Blue Team Competitor

August 2025 – May 2026

NCAE Cyber Games — National Collegiate Cyber Defense Competition

- Competed nationally as a blue team defender, protecting live infrastructure against active red team attacks in timed, high-pressure scenarios.
- Captured flags through log analysis, encoded payload decoding, and attacker-activity tracing using Splunk SIEM and Linux CLI tooling.
- Applied reverse engineering techniques to analyze obfuscated binaries and recover hidden data; cracked password hashes with John the Ripper.
- Decoded multi-stage cipher and encoding challenges using CyberChef and dCode under strict time constraints.
- Operated across multiple virtualized Linux environments, pivoting between VMs during live defense scenarios.

PROJECTS

StintMind — AI Motorsport Race Strategy & Security Platform

May 2026 – Present

Personal Project

- Built a Python desktop application delivering real-time AI race strategy for competitive motorsport teams in iRacing and Le Mans Ultimate.
- Ingests 60 Hz shared-memory telemetry to predict tire degradation, fuel consumption, and lap-time evolution via ML models.
- Implemented CIA-triad security architecture: AES-256-GCM encryption and HMAC-SHA256 frame integrity on all data streams.
- Surfaced strategic recommendations through a PyQt6 graphical interface.

Tech: Python, PyQt6, Machine Learning, AES-256-GCM, HMAC-SHA256

TECHNICAL SKILLS

Programming & Data: Python, C#, .NET, PyQt6, Java, HTML, CSS, SQL, Tableau, Data Analysis

Cybersecurity: Wireshark, Splunk, Blue Team Operations, Threat Detection, Reverse Engineering, Malware Analysis, CyberChef, John the Ripper, Network Monitoring

Systems: Linux, Windows Administration, macOS, Virtual Machines, OS Internals (Processes, Threads, Virtual Memory)

Game Security: PC Cheat Ecosystems, External & Internal Cheats, Anti-Cheat Logic, Wall Hacks, Aimbots

Game Development: Unity, C#, Unity UI Development (Menus, HUD)

Professional: Technical & Non-Technical Communication, Rapid Self-Directed Learning, Knowledge Gap Identification, Safe Malware Handling, Excellent Verbal & Written English
